

MCKENDREE
UNIVERSITY

MSN Program Outcome Goal

Graduates of McKendree University's Master of Science of Nursing program will contribute to improving outcomes in one's area of practice by analyzing underlying disparities in knowledge of evidence; formulating research questions; and systematically evaluating the impact on quality and disseminating evidence-based solutions to issues. Graduates will be prepared to respond to the evolving healthcare system to meet the nation's health needs.

MSN Aggregate Outcomes

Upon completion of the program, the graduate will be able to:

1. Integrate theories and scientific findings into research and practice.
2. Analyze the effects of policy, economics, and societal influences on healthcare systems.
3. Appraise the effects of systems and organizational leadership on healthcare outcomes.
4. Integrate the behaviors and functions of a masters prepared nurse into professional roles.
5. Demonstrate effective interprofessional collaboration and communication in practice.
6. Analyze the impact of ethical issues on professional practice.
7. Utilize advanced skills according to standards of practice.
8. Engage in scholarly activities to foster lifelong learning in professional practice.
9. Utilize research, informatics, and technologies to provide safe high-quality healthcare, initiate change, and improve healthcare outcomes.
10. Demonstrate cultural responsiveness in service to individuals, families, aggregates, and populations throughout the health-illness continuum.
